RE: "Centric materials"

Dear Dr. Levy.

Thank you for your letter and the articles. I read all the materials you sent. You certainly were ahead of your times and your articles provide a visionary approach to the concept of centric relation.

However, the early work that impressed me the most as related to centric relation was the intra-oral telemetry studies. The results clearly demonstrated that when dentitions were reconstructed into retruded CR, patients still functioned in an anterior CR position, i.e., in CO and not CRO.

Best regards,

Donald J. Rinchuse
